

# DriveLock

## Removing Menu items from Drivelock Menu

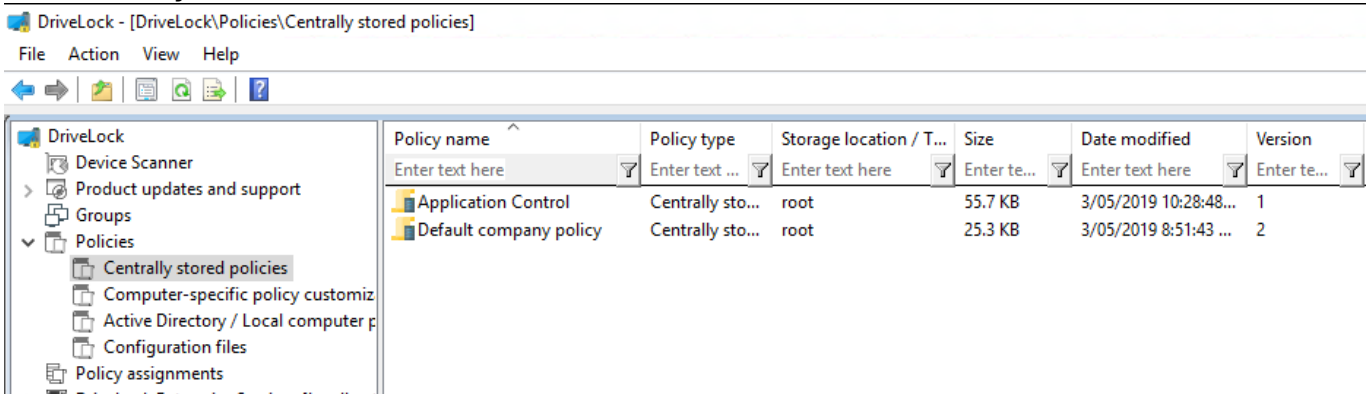

### Scope:

Quite often it is preferred if end users do NOT see menu items they may not need.

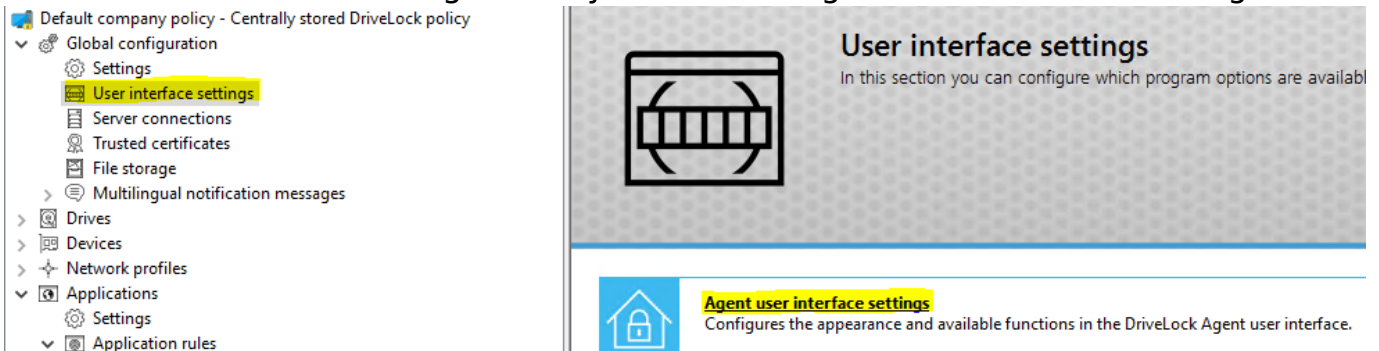

### Answer:

These settings can be adjusted with the Policy that is assigned to the EndPoint. Open your DriveLock Management Console. Navigate and edit your policy (If your unsure on your Policy, give us a call and we can assist you)

When you are inside your policy you can expand the following menu tree: Company Policy -> Global Configuration-> User interface settings. Inside this area of the configuration you will find 'Agent user interface settings'

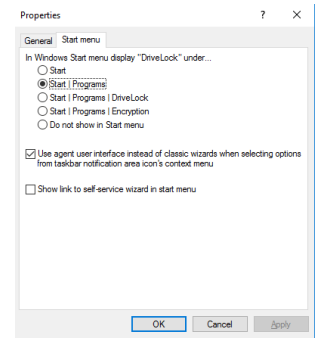

# DriveLock

Within this area you can now adjust what the endpoint machines will receive within their start menu and system tray.

The image shows a Windows-style dialog box titled "Properties" with a question mark and a close button (X) in the top right corner. The dialog has two tabs: "General" and "Start menu", with "Start menu" selected. Below the tabs, there is a section with a checked checkbox labeled "Enable Agent user interface (available on DriveLock 7 and later)". Underneath is a section titled "Available end user functions" with a horizontal line. This section contains two columns of checkboxes. The left column includes: "Home" page (checked), "Encryption" page (checked), and sub-items: "Unlock agent" (checked), "My network profiles" (checked), "Create" (checked), "Create cloud storage folder" (checked), "Mount" (checked), "Recover" (checked), "Manage certificates (DFP only)" (checked), and "Hide DriveLock Encryption 2-Go entries from submenus" (unchecked). The right column includes: "Status" page (checked), "Drives" (checked), "Devices" (checked), "Smartphones" (checked), and "Group Policy" (checked). At the bottom of the dialog are three buttons: "OK" (highlighted with a blue border), "Cancel", and "Apply".

# DriveLock

For those with DriveLock Encryption 2-Go you will need to go to: DriveLock Policy -> Encryption -> DriveLock Encryption 2-Go -> Settings -> Encryption user experience

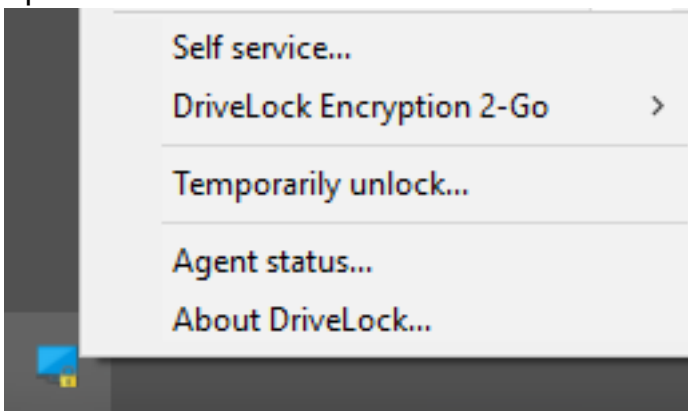

### Encryption user experience

These settings determine the program options that are available to users.

- [Context menus available in Windows Explorer](#) (Not configured)
- [Start menu configuration](#) (No Start menu entries)
- [Available Start menu items](#) (Not configured)
- [Menu items available from the taskbar icon](#) (Not configured)
- [Order of menu items in taskbar icon](#) (Not configured)
- [Bring all dialogs to top-most position](#) (Not configured (Disabled))

While some of the settings in this section are required, you can keep the start menu nice and clean, simply relying on the Windows Explorer options or System Tray Icon options.

For any assistance please get in touch with us and we can make your understanding/configuration as easy as possible.
